Note: Do not confuse yourself with the word "external" here. If you do not have a configured configuration file, add the following to your Jest settings and create the jest.setup.js file at the root of the project: Settings: { /jest.setup.js}; Then add the following to the Jest configuration file to simulate the native module DeviceInfo: import MockdeviceInfo 'React-Native-Device-Info' / Jest / Reactive-Native-Device-Info-Mock; jest.mock('react-native-device-info', () => mockDeviceInfo). Get the sample project for more information. Example: IMPORT { USEDEVICEIDNAME} from 'REABE-NATIVE-DEVICE-INFO'. Const {loading, result} = UseDeviceName (); // [Charging: true, result: 'Becca's iPhone 6'] .{loading? // windows : 'Loading ...' result : 'Usbassystemfeature informs if the device has a specific system feature. Refer to the API documentation for appropriate use. We accept pull requests that add new iOS devices to list with device names. Examples DeviceInfo.isLandscape () .Then (ifLandscape) => { // true}; ISMOUSECONNECTED () informs whether the device has a connected mouse. Arrays and objects will be empty ([]) and / or respectively. Examples DeviceInfo.getType () .Then (ifTYPE) => { // "User" , "Eng"}; GETTOTALDISKCAPACITY () Get all the total size of disk storage in bytes, taking into account the calculation of data and rof file systems.
